Attention: Please collect blood samples by puncturing the rubber cap of the vacutainers. Manual opening of caps and filling it must be avoided strictly. Lab reports are subjected to pre-analytical errors due to inappropriate patient preparation, phlebotomy practices, storage and transport. Please inform SMART Lab in case of any discrepancies with the expected results on the same day on Fax no. 2536

| OPD / Ward:    | Medical Oncology | Modality   | CT                 |
| Procedure Name | IRCH Chest       |            |                    |

### Procedure: CECT of Chest

Clinical background: PNET

Mediastinum: Normal, No lymph node enlargement. Few tiny foci of calcifications are seen in bilateral hilar and left paratracheal region.

Trachea/ main bronchi: normal.

Both lungs: Air trapping, hyperinflation seen in bilateral lower lobes

Multifocal Areas of consolidation in posterior segments of RUL and superior segment of RLL

Serosal spaces:

No pleural/ pericardial effusion.

Additional information: Note made of rebound thymic hyperplasia

**Comparison:** As compared to previous scan dated 04-06-2025, resolution of centrilobular nodules in bilateral lower lobes with persistent hyperinflation. There is new onset appearance of multifocal consolidation in posterior segments of RUL, RLL

**Impression:** Multifocal Areas of consolidation in posterior segments of RUL and posterior segment of RLL- likely infective

Bilateral lower lobes show hyperinflation changes

Preliminary by: Dr. Rajnish Mauriya (Senior Resident), 01-Apr-2025 12:30
